

Indiana Department of Natural Resources / Division of Water

30 Day Public Notice Report

The Department of Natural Resources is providing this report to satisfy the requirements of the "Procedures Concerning Certain Licenses Act", IC 14-11-4, and its associated administrative rule, 312 IAC 2-3. The application files are available for public inspection at the Division of Water's office in Indianapolis. Please contact the Division's Technical Services Section at (317) 232-4160 or the toll free number 1-877-928-3755 to make an appointment for file review. Photocopies may be made for a nominal charge of \$0.10 per 8 1/2 " X 11" copy.

A pre-action public hearing on an application may be requested by filing a written petition with the Director, Division of Water:

Michael W. Neyer, P.E., Director
Division of Water
Room W264
402 West Washington Street
Indianapolis, Indiana 46204

For a petition to be considered valid it must:

1. Contain the typed or legibly printed name and complete mailing address of each petitioner;
2. Be signed by a minimum of 25 individuals who are at least 18 years old and either reside in the county where the project will take place or own real property within 1 mile of the project site;
3. Affirm that each signatory to the petition satisfies the requirements of item 2; and
4. Identify the application for which the public hearing is being requested either by the application # or the applicant's name and the project description.

A petition which does not meet these requirements will be considered invalid and the hearing request will not be granted.

A person may request that the Department provide written notice of its action on an application by filing a written request with:

Division of Water
Room W264
402 West Washington Street
Indianapolis, Indiana 46204

The request must identify the application by either the application # or the applicant's name and the project description.

Indiana Department of Natural Resources / Division of Water

30 Day Public Notice Report

Application # : FW-22820

Stream : Little Calumet River

Applicant : *Indiana Department of Transportation
Greg Kicinski
100 North Senate Avenue, IGC Room N601
Indianapolis, IN 46204-2220

Description : As part of the Interstate 80/94 Highway project, construction in the north overbank of the Little Calumet River will include new ramps at the Grant and Broadway Street interchanges as well as new levees connecting existing levees to the new ramps in the interchanges. The new connecting levees will have a crown width of 10' with 2.5:1 sideslopes and top elevation equal to the existing levees and new ramps. Additional work includes widening and relocating existing drainage ditches to accommodate increased runoff and construction of the new ramps. Details of the project are contained in information and plans received at the Division of Water on April 7, 2004.

Location : Along the north overbank of the Little Calumet River in the area of the Grant and Broadway Streets interchanges
DOWNSTREAM: near Gary, Calumet Township, Lake County
NE¼, SE¼, SE¼, Section 14, T 36N, R 8W, Highland Quadrangle
Quad Code: 4108754
UTM Coordinates: Downstream 4601895 North, 465564 East
UPSTREAM: near Gary, Calumet Township, Lake County
SE¼, SE¼, SE¼, Section 15, T 36N, R 8W, Gary Quadrangle
Quad Code: 4108753
UTM Coordinates: Upstream 4601571 North, 473446 East

Statute/Rule : Flood Control Act, IC 14-28-1, with the associated Flood Hazard Area Rule, 312 IAC 10

Indiana Department of Natural Resources / Division of Water

30 Day Public Notice Report

Application # : FW-22823

Stream : Symons Ditch

Applicant : Hamilton County Highway Department
Mike McBride
1700 South 10th Street
Noblesville, IN 46060-3835

Description : An existing 18' single span reinforced concrete slab bridge carrying Eagletown Road over the creek will be replaced with a 14' span pre-cast reinforced concrete 3-sided structure with a base slab and wingwalls. Excavation will occur in the channel lowering the channel bottom by approximately 3' for a distance of approximately 95' centered on the new culvert. The channel will be lined with riprap to control erosion. The road will be widened to provide two (2) 11' lanes and two (2) 4' shoulders. Details of the project are contained in plans and information received at the Division of Water on April 12, 2004.

Location : At the Eagletown Road stream crossing
near Sheridan, Adams Township, Hamilton County
SE¼, NE¼, SW¼, Section 28, T 20N, R 3E, Sheridan Quadrangle
Quad Code: 4008622
UTM Coordinates: Downstream 4444400 North, 568625 East

Statute/Rule : Flood Control Act, IC 14-28-1, with the associated Flood Hazard Area Rule, 312 IAC 10

Indiana Department of Natural Resources / Division of Water

30 Day Public Notice Report

Application # : FW-22836

Stream : Tippecanoe River

Applicant : Bess Russell
506 North Riverside Drive
Winamac, IN 46996-1132

Description : Approximately 125' of river's eroded bank will be stabilized with riprap to protect the bank from further erosion. The riprap will be keyed into the streambed at its base and will conform to the existing bank at the project limits. It will have a maximum height of 12', a maximum streamward projection of 1' beyond the existing bank. Details of the project are contained in information and plans received at the Division of Water on April 20, 2004.

Location : Along the right (west) bank of Tippecanoe River approximately 3000' upstream (north) of the Washington Street stream crossing
at Winamac, Monroe Township, Pulaski County
SW $\frac{1}{4}$, SW $\frac{1}{4}$, SW $\frac{1}{4}$, Section 12, T 30N, R 2W, Winamac Quadrangle

30 Day Public Notice Report

Application # : FW-22840

Stream : Sycamore Creek

Applicant : Patrick Cavanaugh
4715 State Road 67
Martinsville, IN 46151-7900

Description : Approximately 500' of Sycamore Creek's eroded left (east) streambank will be graded to an approximately 20% to 30% slope and stabilized with riprap over geotextile fabric to protect the bank from further erosion. The riprap will be keyed into the streambed at its base and conform to the existing bank at the project limits. The riprap will have a maximum height of 5', a maximum streamward projection of 2' and will have 1:1 sideslopes. Additionally, the entire bank of Sycamore Lake in the east overbank of Sycamore Creek will be regraded. An existing levee along the north and east edge of the lake will be removed and the material used to reconfigure the lake's shoreline. Details of the project are contained in information received at the Division of Water on April 20, 2004.

Location : Along the left (east) bank of Sycamore Creek beginning approximately 100' downstream of the State Road 67 bridges and continuing downstream approximately 500'
DOWNSTREAM: near Centerton, Clay Township, Morgan County

30 Day Public Notice Report

Application # : FW-22841

Stream : Unnamed Tributary Fall Creek

Applicant : Bruce Burnett
5551 Paragon Road
Martinsville, IN 46151-9465

Description : A new culvert crossing will be placed in an Unnamed Tributary Fall Creek to carry a proposed driveway across the stream. The new crossing will consist of two (2) parallel 84" diameter corrugated metal pipes 30' long placed in the bottom of the channel with an invert elevation of 570.0' NGVD. The proposed driveway will be on fill over the pipes with the crown 1-1/2' over the top of the pipes. Details of the project are contained in information and plans received at the Division of Water on April 21, 2004.

Location : On Unnamed Tributary Fall Creek approximately 4000' upstream of the State Road 67 bridge
near Paragon, Ray Township, Morgan County
SE¼, SE¼, SW¼, Section 7, T 11N, R 1W, Paragon Quadrangle

30 Day Public Notice Report

Application # : FW-22851

Stream : Ohio River

Applicant : Lawrenceburg Conservancy District
E B Sietz
506 Nowlin Avenue
Greendale, IN 47025-1537

Description : A portion of the existing levee will be reconstructed by removing a gate and retaining walls. The height of 22', top width of 10', and 3:1 sideslopes will be maintained. In addition, approximately 410' on the dry side of the levee will be filled in to obtain a 3:1 slope. Details of the project are contained in information and plans received at the Division of Water on April 26, 2004.

Location : Along the right (northwest) overbank, approximately 7000' downstream of the US Route 275 river crossing and approximately 6400' upstream of the confluence with Tanners Creek
DOWNSTREAM: at Lawrenceburg, Lawrenceburg Township, Dearborn County

Application # : FW-22856

Stream : Ohio River

Applicant : Rockport River Terminals Inc.
Bruce Kanipe
2932 East Highway 66
Rockport, IN 47635

Description : An existing 1100' x 500' excavated impoundment area will be filled in the floodway for future industrial/commercial use. The fill will consist of bottom ash and fly ash. The fill's maximum finished elevation will be 400', NGVD. In addition, an approximately 100' x 200' sediment control basin will be constructed. Mitigation for the disturbance of wetlands and floodplain habitat will be implemented at a 1:1 ratio. Details of the project are contained in information and plans received at the Division of Water on April 26, 2004.

Location : Along the right (northwest) overbank, approximately 1500' to 2600' upstream (northeast) of the confluence of Honey Creek
near Grandview, Hammond Township, Spencer County

Application # : FW-22862

Stream : West Fork White River

Applicant : City of Martinsville
Ross O Holloway, PE
PO Box 234
Mooreville, IN 46158-0234

Description : Approximately 20' to 100' of the existing deteriorating 36" diameter corrugated metal pipe which is a discharge outlet from the Waste Water Treatment Plant will be replaced with a 36" aluminized corrugated metal pipe. The new pipe will be set in a concrete head wall. The river bank around the outlet and 30' to each side will be shaped to a slope of 3:1 to 4:1 and reinforced with natural stone and revetment riprap over a filter fabric. The riprap will conform to the river bank at the upstream and downstream project limits and will be keyed into the river bottom. Details of the project are contained in information and plans received at the Division of Water on April 29, 2004.

Location : Approximately 4000' west of the Rogers Road and State Road 39 intersection and continuing west for approximately 300' to the east bank of the West Fork White River
near Martinsville, Washington Township, Morgan County

Stream : Lick Creek

Applicant : *Indiana Department of Transportation
Carole Korbly Scott
100 North Senate Avenue, Room N642
Indianapolis, IN 46204-2249

Description : The existing continuous steel beam and composite steel beam bridge carrying Carson Avenue over Lick Creek and I-465 will be rehabilitated by removing and replacing the bridge deck together with the caps, columns and also the top 2' of crash wall at Bents 4,5, and 7. Additionally, riprap over geotextile will be placed around Bent 2 and the base of the slope wall adjacent to Bent 3 to prevent scour. Also, 225' of Lick Creek's eroded stream bank will be stabilized with riprap over geotextile with the riprap having a maximum height of 5', a maximum streamward projection of 2' beyond the existing bank and at a 2:1 side slope. Details of the project are contained in plans and information received at the Division of Water on April 30, 2004.

Location : At the Carson Avenue bridge
near Beech Grove, Perry Township, Marion County

Stream : Sand Creek

Applicant : Sand Creek Development Corporation
Larry Cronkleton
136 South 9th Street, Adler Building
Suite 206
Noblesville, IN 46060-2600

Description : An approximately 680' x 100' area will be excavated in the floodway. The excavated material will be placed landward of the floodway for the development of Sand Creek Overlook Business Park. Two drainage swales, approximately 680' and 100' will be constructed within the excavated area. The 100' swale will terminate with metal end sections and riprap. In addition, approximately 250' of a proposed sanitary sewer will be placed in the floodway and will connect to an existing sanitary sewer. Details of the project are contained in information and plans received at the Division of Water on April 29, 2004 and May 19, 2004.

Location : Along the right (west) overbank, approximately 500' to 1150' upstream (northeast) of the Cumberland Road stream crossing
near Fishers, Fall Creek Township, Hamilton County

Stream : Rock Lick Branch

Applicant : Lehigh Cement Company
Debbie Tolliver
PO Box 97
121 North First Street
Mitchell, IN 47446-0097

Description : A new culvert crossing will extend an existing culvert in Rock Lick Branch to improve the existing haul road. The new crossing will consist of (3) 36.5' x 8.5' pipes, laid end to end. The inlet ends of the culverts will be beveled. The inverts and outlets will be skewed 0 degrees to align with streamflow. Minor channel shaping will occur both downstream and upstream of the crossing to provide a better flow transition into and out of the culvert system. The shaping will be confined to the construction right-of-way. The shaped areas will be lined with a layer of sheet rock to control erosion. The approach roads will be constructed on fill placed to a maximum height of 4' to 8' over the existing elevations. The crown of the roadway over the culverts will be a minimum 50' wide, haul road. Details of the project are contained in information and plans received at the Division of Water on April 30, 2004.

Location : Approximately 3100' southwest (upstream) of the County Road 625 South crossing

Application # : FW-22892

Stream : Jackson Run

Applicant : Scott Hines
6675 Wimbeldon Drive
Zionsville, IN 46077-9152

Description : A new 3 acre pond will be constructed North of the Boone County legal drainage ditch known as Jackson Run. Floodway construction activities associated with include: 1.) a 150' wide by 700' long by 15' deep pond. Material excavated from the pond will be used to construct an earthen embankment along the streamward side. The embankment will be approximately 750' long with 3:1 side slopes and a 5' top width. The remaining spoil will be distributed on top of the hill North of the pond. A 40' long outfall system consisting of a 24" diameter reinforced concrete pipe will convey storm water from the pond to the stream. Both ends of the pipe will be beveled to conform to the banks. An 18" thick layer of riprap will be placed over a geo-textile fabric at the base of both end sections. An earthen dam will be constructed across the existing stream coming from the North and emptying into Jackson Run legal drain. This dam in conjunction with excavation will create a 3 acre recreational lake. The dam will be approximately 20' long and 7' high. It will have a crest elevation of 910', NGVD and a 5' top width. The embankment slopes will be 3:1 and 3:1 on the upstream and downstream faces, respectively. The principal spillway will consist of a 40' section of 24" concrete pipe fitted with antiseep collars. The structure is designed to maintain a normal pool elevation of 901' NGVD. A vegetated emergency spillway will be constructed in the south abutment. It will have a 20' bottom width, 3:1 side slopes, and a control elevation of 905', NGVD. Details of the project are contained in information received electronically at the Division of Water on May 16, 2004.

Location : The pond will be located on 17 acres on SW corner of County Roads 300 South and 800 East. The pond will begin 330' West of County Road 800 East and continue West 700'. The pond will vary in width from 125 ft to 175 ft.

Indiana Department of Natural Resources / Division of Water

30 Day Public Notice Report

Application # : FW-22898

Stream : Horn Ditch

Applicant : City of Goshen, Engineering Dept.
Robert McCoige
204 E. Jefferson St.
Goshen, IN 46528

Description : The project involves the extension of existing Century Dr. roadway and municipal utilities. An approximate 520 LFT portion of the proposed curbed, 28 ft wide roadway is within the 100 yr floodway of Horn ditch between the connection to existing Century Dr. at the project's N end at station 105+56 to approx. station 110+75, (see plan sheet X-1169-02). Within that area, approx. 681 SYD involves cut ranging in depth to approx. max. 0.7 ft, and approx. 933 SYD involves fill for an approx. net fill of 124 CYD. The fill material is to be taken from adjacent areas w/in the floodway. The fill is to be set back from the top of Horn Ditch bank at a range of approx. 90' to 140'. An earth berm, apparently from long past ditch maintenance, exists between the ditch and the proposed roadway. The highest fill within the 100 yr floodway for the proposed roadway is approx. 810.2 @ station 110+75. This height is below the height of the above-mentioned existing berm between the ditch and proposed roadway, (berm height elevation ranges from approx. 811 to 814+). The proposed 12" water main, and max 10" sanitary sewer extensions involve no fill. Also, two 24" storm sewer outfalls to Horn Ditch are proposed at station 108+50 (plan sheet -02), and due west of station 153+72 (plan sheets -14, -19, and -20). The outfalls include rip rap over geotextiles for erosion control, and are to conform to existing Horn Ditch bank grades, thus they involve minimal fill (< 1 CYD fill per outfall). Also, an open cut crossing of Horn Ditch with 12" water main is proposed near the project's south end (plan sheet -01B). The ditch is to be returned to its existing grades and stabilized by mulched seeding. The water main crossing thus involves no fill. Also, the branch of Horn Ditch which is parallel and just N of CR 38 at the project's south end is to be crossed by the roadway extension for roadway connection to CR 38. This is to be done over a proposed 180 LFT culvert pipe, (span 95", rise 67"), with rip rap over geotextiles at both pipe ends for erosion control. Approximately 17 CYD of cut is involved along the ditch bottom for placement of the culvert and the rip rap. Above the floodway, between approx. elevs 811 and 816, approx. 120 CYD of fill is to be placed over the culvert pipe, (see plan sheet -17). Details of the project are contained in information and plans received at the Division of Water on May 17, 2004.

Location : Extension of existing Century Dr. south of CR 36 on the east side of Horn Ditch (east of US 33), to connect to CR 38 in Goshen, IN.

30 Day Public Notice Report

Application # : FW-22899

Stream : Blue Woods Creek

Applicant : City of Carmel
Mike McBride
One Civic Square
Carmel, IN 46032

Description : The proposed project includes the reconstruction of approximately 5,000 feet of Gray Road. The project extends from the intersection of Gray Road and 96th Street north to the south leg of the roundabout intersection at 106th Street. Beginning at the northern approach of 96th Street and ending north of the entrances to the Martin-Marietta quarry the existing pavement on Gray Road will be removed and replaced with concrete pavement, pending a traffic analysis and economic comparison. The proposed roadway will provide two 12-foot travel lanes in each direction separated by a 16-foot center median. The roadway will have curbs and gutters and multi-use pathways on both sides. North of the entrances to the Martin-Marietta quarry, the pavement will transition to two 18-foot bituminous travel lanes separated by a 16-foot center median. The curbs and gutters and multi-use pathways will continue through this section. The existing horizontal alignment will be maintained and the proposed profile of Gray Road will be raised to be above the elevation of 96th Street at a minimum. Street approaches will be constructed for the entrances to Martin- Marietta's quarries. The proposed bridge at Blue Woods Creek is anticipated to be a two span (44'-0, 44'-0) reinforced concrete slab with a 10 degree skew. The proposed structure will replace two 24 inch corrugated metal pipes and one 96 inch corrugated metal pipe. The out to out bridge coping will be 89'-0 and will include two 18-foot lanes bordered by a 5-foot buffer and an 8-foot sidewalk and separated by a 16-foot center median. The impacts on the stream will extend approximately 20 feet upstream and 20 feet downstream from the proposed structure. Riprap will be used to protect the substructure elements located in the floodway. Details of the project are contained in information and plans received at the Division of Water on May 18, 2004.

Location : The proposed project includes the reconstruction of approximately 5000 feet of Gray Road. The project extends from the northern approach of 96th Street northward to southern approach of the roundabout at 106th Street and includes the replacement of the culverts carrying Gray Road over Blue Woods Creek with a bridge

Lake : Big Long Lake

Applicant : Two Indians Homeowners Association
James or Catherine Snelling
17003 State Road 1
Spencerville, IN 46788-9678

Description : An existing 75' wide x 225' long channel will be dredged. Approximately 3-4' of accumulated muck and debris will be removed from the channel bed by dredging to a maximum depth of 6' below the lake's legal level at the center of the channel and sloping uniformly to a depth of 3' at the shoreline. The excavated material will be transported to an upland containment area for dewatering and disposal. Water from the containment area will not be allowed to return to the lake. Details of the project are contained in information and plans received at the Division of Water on April 26, 2004.

Location : From the west bank of the Channel off Big Long Lake continuing into the lake approximately 225'

Lake : Messick Lake

Applicant : *Indiana Department of Natural Resources
Dale Gick, PE
Division of Water
402 West Washington Street, Room W264
Indianapolis, IN 46204-2641

Description : Messick Lake has an erosion problem on the right and left banks. The left (south) bank of Messick Lake is at or below legal lake level, with the exception of a small area that is holding the legal lake level. The left bank construction area will be 30' wide by 100' long. Two rows of sheet pile will be driven 8' deep for a distance of 87.5'. The rows of sheet pile will be 6' apart and start at the ends of the abutment. The area between the piling will be filled with backfill and covered over with glacial stone to an elevation equal to or lower than the lowest point of the area holding the legal lake level. The right (north) bank construction area will be 25' x 30'. Two rows of sheet pile will be driven 15' deep with the top elevation at the existing ground level. The first row will start on the downstream side of the abutment. 4' of sheet pile will be driven parallel to the abutment, downstream. From that section, the sheet pile will turn northeasterly, in a direction parallel to the tributary, and be driven a distance of 22'. At the end of the 22' section, the pile will turn at approximately a 45-degree angle to the east and extend an additional 3'. The second row will start at the upstream end of the abutment. The sheet pile will be driven at approximately a 45-degree angle to the upstream abutment (northeasterly) for a distance of 25'. Glacial stone will be laid against the downstream side of the 22' section of sheet pile, on the bank of the tributary. Between the two lines of sheet pile, glacial stone will be placed on the existing ground elevation. Glacial stone upstream of the 25' section of sheet pile will be placed on a 10' x 25' area on the existing ground. Details of the project are contained in information and plans received at the Division of Water on April 26, 2004.

Lake : Dewart Lake

Applicant : *Indiana Department of Natural Resources
Dale Gick, PE
Division of Water
402 West Washington Street, Room W264
Indianapolis, IN 46204-2641

Description : The project consists of excavating an area of 40' x 20', not to exceed a bottom elevation of 865.5' NGVD'29, on the upstream side of the control structure. Glacial stone will be placed in the 40' x 20' excavation. Perforated PVC pipe will be embedded in the glacial stone to discourage beaver activity. Glacial stone will be placed on the downstream side of the control structure over a 95' x 20' area. The portion of this area adjacent to the control structure (45' x 20') will be grouted in place. Trees will be removed from the small levee located north of the control structure and glacial stone will be placed on the upstream side of the levee. Details of the project are contained in information and plans received at the Division of Water on April 26, 2004.

Lake : Green Lake

Applicant : *Indiana Department of Transportation
Carole Korbly Scott
100 North Senate Avenue, Room N642
Indianapolis, IN 46204-2249

Description : Both northbound and southbound bridges over Green Lake will have their reinforced concrete bridge decks removed and replaced. The existing prestressed concrete I-beam superstructures will be removed and replaced. New beam lines will be added to support the widened bridge deck. New pile caps will be constructed and new 14" diameter steel incased concrete piles will be added to support the widened caps. The northbound bridge is a 1,235', 38-span bridge with span lengths varying in size from 33.5' to 32.5'. The bridge is on a 0-degree skew and will have an out-to-out coping width of 45' 4". The southbound structure is a 1,034.8', 32-span bridge with span lengths varying in size from 33.5' to 32.5'. The bridge will be build on a 0-degree skew and will be widened to an out-to-out coping width of 53' 4" to accommodate a new acceleration lane from the I-80/90 entrance ramp. The project will also include the placement of riprap on geotextile turnouts on the outside shoulders at both ends of both bridges. The northbound and southbound profile grades on the bridges will be raised slightly by approximately 4.5" and 7.5" northbound and southbound, respectively, in order to raise the beams from the water at the north ends of the bridges. The edge of the lake will remain unchanged at both ends of the bridges. Details of the project are contained in information and plans received at the Division of Water on April 30, 2004.

LaPorte, IN 46350-3387

Description : An existing 28' wide x 100-150' long boat ramp will be dredged to a depth of 4-6'. The dredging will proceed lakeward only as needed to intercept the natural slope of the lake bottom. All dredged material will be removed with a hydraulic excavator and will be placed landward of the boat ramp area. All material will be stabilized and/or retained immediately and permanently. Details of the project are contained in information received electronically at the Division of Water on May 13, 2004.

30 Day Public Notice Report

Application # : PL-19832

Lake : Lake Wawasee

Applicant : Wawasee Boat Company
Douglas Anderson
6521 Cornelius Road
Syracuse, IN 46567-9767

Description : The Wawasee Boat Company is proposing to repair approximately 60 linear feet of a failing seawall. The new seawall will be constructed out of vinyl piling. A field stone toe will be placed in front of the seawall to reduce wave action near shore. The seawall will be constructed approximately 3-5 feet landward of the current seawall to obtain the correct height so that no additional fill needs to be brought on site for construction. In addition, a new concrete pad and piling will be poured to repair the existing boat launch used by the marina for daily operations. The pad will measure approximately 13 feet wide and 35 feet long. The pad will not extend any further than the existing pilings. Details of the project are contained in information received electronically at the Division of Water on May 14, 2004.

Location : The project is located at the Wawasee Boat Company
at Syracuse, Turkey Creek Township, Kosciusko County
Section 9, T 34N, R 7E, Lake Wawasee Quadrangle
